# Elvora Logistics Flow – v2

User Guide · Smart Link Integration · 2025

## ■ Overview

Elvora Logistics Flow v2 automates loading and delivery tasks.
It connects warehouse staff and forklift drivers with AI. Private carriers receive a Smart Link (no app needed)
Everything is recorded and visible in the Logistics/Operations hubs.

## ■■ Key Functions

1) Smart Link – private truck drivers can receive tasks without the app.
2) AI Schedule – calculates weight, route, and ramp automatically.
3) Manual/No-QR – confirm ramp manually, or use camera/GPS when QR is missing.
4) Voice + Text Orders – short, clear commands. Example: D3 / T4 / Pula 52100 / Milk x4.
5) Reports – daily PDF with loads, pallets, and exceptions.

## ■ How to Use

• Warehouse scans invoices or opens email; AI groups pallets by address.
• Manager approves the plan; ELA sends tasks to forklift drivers (per ID).
• Private carrier gets a Smart Link with ramp, truck and destination.
• Driver loads and taps ■ Done (or sends photo proof).
• Dashboard shows status in real time; end-of-day report is saved automatically.
